**JACK BERMAN**  
PRIMARY EXAMINER

The following is an examiner's statement of reasons for allowance: While it would have been obvious to a person having ordinary skill in the art to use the method and device for preparing a plurality of analyte molecules for analysis claimed in US Patent No. 6,603,118 to prepare single molecules in the same way, the Terminal Disclaimer filed on September 8, 2003 overcomes any obvious-type double patenting rejection based on this patent. With respect to claim 145, this claim (and the claims depending from it) distinguish the invention from that disclosed by Williams et al. because, although Williams et al. does teach to apply focused radiation in a manner effective to eject a droplet of an analysis-enhancing fluid from a reservoir to deposit the droplet on any selected target zone on a target that comprises a contiguous surface on which are arranged a plurality of target zones, since Williams et al. goes on to say, at [0070], that "[t]he target may comprise, for example, an array of target zones, each zone having affixed to it a sample of the binding partner for which specific binding is sought to be identified", it is clear that the samples to which the droplets are directed are the materials affixed to noncontiguous sites on the target, not the contiguous surface of the target. Therefore Applicant is correct in the argument made in the remarks filed on September 8, 2003 that Williams et al. does not teach to direct the droplets to sites on a contiguous sample surface.

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."
